5. The institution in which you work, has taken several steps for efficient waste management in your campus. Write a brief report on these initiatives. 6

6. Read the passage given below and answer the questions :

Sea level rise is an increase in the level of world's oceans due to the effects of global warming. Burning fossil fuels is one of the causes of global warming because it releases carbon dioxide and other heat-trapping gases into the atmosphere. The oceans absorb the majority of this heat and expand, resulting in rising ocean levels.

Glaciers and ice sheets on land are also greatly affected by global warming. These reserves of ice are located in places like Greenland and Antarctica. Typically, they melt during the warmer months of the year and the ice is replenished in colder months. With the average global temperatures rising, however, ice caps and glaciers are experiencing a disproportionate amount of melting at an accelerated rate.

Sea level rise poses a serious threat to coastal life around the world. Consequences include increased intensity of storm surges, flooding, and damage to coastal areas. In many cases, this is where large population centers are located, in addition to fragile wildlife habitats. Therefore, people may become displaced and will need to seek safer homes.

*Questions :*

- (a) What is a 'topic sentence' ? In your opinion, what is the topic sentence in the above passage ? 1+1
- (b) Give a suitable title to the above passage. 1
- (c) Write a summary of the above passage in your own words (around **75** words). 4
